

1. Create a DataFrame `sd` from `StudentGrades.csv` dataset
2. Display a summary of the basic information about this DataFrame and its data.
3. Return the first 3 rows of the DataFrame `sd`.
4. Select just the 'semester' and 'grade' columns from the DataFrame `sd`.
5. Select the data in rows [3, 4, 8] and in columns ['semester', 'grade'].
6. Select the students who have passed the class. A passing grade is 60.00 or higher.
7. Select the students who failed the course in 14_Fall. A failing grade is 59.99 or lower
8. Select the students who got a B+. B+ grade range is 87.00 to 89.99. Hint: You can use 'loc' attribute and & operator
9. Change Student 5's grade to 78.00
10. Reduce every student grade by half a point.

PART II

11. What is the average of all grades for this course?
- 11.5 What is the average grade for each semester. Hint: You can use 'groupby' and 'sort_values' methods.
12. How many students are there in each semester? You can use 'groupby' and 'sort_values' methods.
13. Show a report that shows the number of students, average grade and the grade standard deviation per semester.
14. What are the lowest 10 grades? Sort students by grade (from lowest to highest). + Code + Markdown
15. What are the highest five grades? Sort students by grade (from lowest to highest).
16. What are the lowest 3 grades for each semester? Sort by semester first and then grade. Hint: You can use 'groupby' and 'sort_values' methods.

17. What are the highest 3 values for each semester? Sort by semester first and then grade.
Hint: You can create a new variable to assign your sd DataFrame and then use 'groupby' and 'sort_values' methods.

18. Which semester has the highest grade average ?

19. Find the average of 10 best students in each semester.

20. What is the average grade for failing students each semester?

PART III

21. Find above average students. Filter the data to show students whose grades are higher than the average.

22. Find students that perform above average of their semester. In other words, show students that are greater than semester average. You can depict each semester separately.
